

ABSTRACT

WEB BROWSING DEVICE, A RELATED METHOD AND RELATED SOFTWARE

5 MODULE

The present invention relates to a web browsing method for selecting a specific hyperlink from a set of hyperlinks that are included in a hyper-document. Each hyperlink of this set refers to a web resource. A first step is the holding for a  
10 specific hyperlink an association of a specific hyperlink with a corresponding description and a belonging user direct select action. Subsequently for each specific hyperlink, the next step is presenting the hyperlink together with the corresponding description and the user direct select action. An activation of such a user direct select action is detected and based on the activation of the user direct select action a  
15 specific hyperlink from the association holding part is determined.

An additional step of the browsing method is the updating of an association by assigning another specific hyperlink and corresponding description to a user direct select action.
